

# TOOLBOX MEETING GUIDE

## Inspecting your safety belt

Inspect your safety belt before each use. Check the buckle, the webbing, the D-rings, and the manufacturer's label for additional user information.

If the belt is damaged or worn, do not wear it.

NOTE: A safety belt that meets CSA Standard Z259.1 is acceptable to WorkSafeBC.

#### **Buckle**

- Make sure the buckle's tongue overlaps the buckle frame, moves freely, and is not bent or worn down.
- Check the roller to make sure it turns freely on the buckle frame.

 Look for frayed, cracked, cut, burned, or otherwise damaged webbing.

### **D-rings**

- Check to see whether D-rings are bent, cracked, nicked, or gouged.
- Do not use safety belts that show signs of damage.

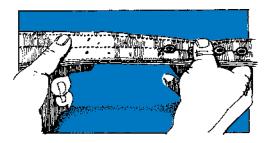

#### Manufacturer's label

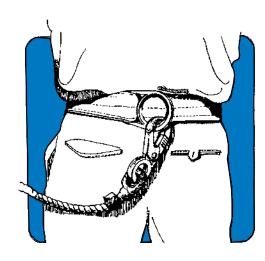

Inspect the manufacturer's label on the belt. The manufacturer's label on a CSA-approved safety belt will contain the following information:

- Manufacturer or vendor identification
- The belt's waist size
- Material from which the belt is made
- Date the belt was manufactured.
- Model number
- "Warning—not to be used for fall arresting"
